Chapter 338: Expansion of Divine Agriculture

Sung Jin-Woo, seated on his throne in Umbra Citadel, continued his vision of creating a flourishing multiverse by expanding the agricultural systems initiated in Chapter 315. His divine wisdom led him to create even more sophisticated systems of cultivation and harvesting, ensuring that every realm could sustain its growing population.

Divine Orchards and Groves

To complement the existing crops, Sung Jin-Woo created vast divine orchards filled with celestial fruits. These fruits had unique properties that provided both sustenance and magical benefits.

List of New Divine Orchards and Fruits:

1. Aurora Apples: Emit a faint glow and enhance mental clarity and mana regeneration.

2. Everbloom Cherries: Never rot, granting vitality and a prolonged lifespan.

3. Starlight Peaches: Improve agility and physical strength upon consumption.

4. Golden Nectarines: Exude divine sweetness and enhance resistance to curses and poisons.

5. Moonlit Lemons: Their juice purifies toxins and restores energy.

The divine orchards were scattered across realms, adapted to their unique environments.

Divine Livestock Expansion

Building on the divine cattle and livestock created earlier, Sung Jin-Woo introduced specialized breeds to sustain the diverse populations of his realms.

New Divine Livestock:

1. Ethereal Goats: Produce milk with healing properties.

2. Sky Bison: Enormous creatures capable of flight, used for transportation and meat.

3. Luminous Chickens: Lay eggs infused with mana, a staple for energy restoration.

4. Crystal Pigs: Their meat contains nutrients that bolster magical abilities.

5. Shadow Oxen: Hardy animals used for labor in difficult terrains.

Advanced Farming Systems

To maximize efficiency, Sung Jin-Woo created advanced farming systems powered by mana-infused machinery. These systems were distributed across realms, ensuring equitable access to food production.

Farming Innovations:

1. Mana Irrigation Systems: Channels divine energy into crops for accelerated growth.

2. Floating Farms: Suspended platforms in the skies, used in realms with limited land space.

3. Aquatic Farms: Underwater systems growing sea crops and maintaining divine fishes.

4. Eternal Harvest Tools: Unbreakable farming equipment that could enhance productivity.

Educational Programs

The Twelve Divine Beings were tasked with implementing educational programs, teaching the inhabitants of their realms how to cultivate these divine resources. Using All-Seeing Eyes, they monitored progress and ensured the knowledge was widely disseminated.

Subjects Taught:

Cultivation techniques for divine crops.

Breeding and care for divine livestock.

Integration of mana-based technology in farming.

Sustainable farming practices for long-term prosperity.

Ceremony of Abundance

To celebrate the expansion, Sung Jin-Woo held a grand Ceremony of Abundance in the Absolute Realm, inviting representatives from all realms.

During the ceremony, Sung Jin-Woo spoke:
Sung Jin-Woo: "The multiverse thrives not through war, but through unity and abundance. These gifts are not merely sustenance but symbols of harmony among all beings."

The ceremony concluded with the first Feast of Realms, where the divine crops and livestock were shared among attendees, symbolizing the prosperity of the multiverse.

Sung Jin-Woo's continued efforts ensured that every corner of the multiverse flourished, solidifying his role not just as a god of creation and abundance, but as a guardian of life and prosperity.
